

Delivering Packaging Solutions

Cold Fold

The Cold Fold insulated shipping box is ideal for safely shipping perishable items and products with temperature constraints. Cold Fold maintains the insulation and integrity of your product.

Cold Fold shipping boxes prevent conduction, convection, and radiant heat transfer. Its thermal liner reflects up to 97% of infra red heat, which a styrofoam insulated container cannot do.

It's a great alternative to foam-insulated shipping boxes, which require you to pack your items in the foam cooler and then insert the cooler into the shipping box. Cold Fold is a single piece container; the shipping box and the thermal liner are attached as one unit. There is no separate, squeaky, cumbersome foam cooler to deal with... simply fold out the Cold Fold box and fill it!

Cold Fold is folded until used, so it stores easily and takes up less space. It also ships flat so it saves in freight and warehousing costs.

Box Specifications

Name	Size	Cubic Ft.	Quantities per Pallet
CF- 8	8x8x8	.2962	500
CF- 10	10x10x10	.5787	500
CF- 12	12x12x12	1	350
CF- 60	31.5x11.25x9	1.85	160
CF- 100	34x13.75x12	3.24	130

Custom Boxes

We can make custom Cold Fold boxes to include single or double bubble liners and can make the corrugated board weight lighter or stronger depending on the application and weight of the product. Display your company logo with our custom printing capabilities!
